Subject: Notification of Software Integration Redundancy and Deprecation

Dear [Recipient Name],

This letter serves as formal notification that the software integration between **[System A]** and **[System B]** has been identified as redundant following our recent system audit and infrastructure update.

Due to the implementation of **[New Solution Name/Internal Feature]**, the existing integration no longer provides unique value to our workflow. To optimize our technical stack and reduce maintenance overhead, we will be deprecating this integration according to the following schedule:

- **End of Development:** [Date] (No further updates or bug fixes)
- **Discontinuation Date:** [Date] (Data sync will be disabled)
- **Final Decommissioning:** [Date] (API keys/connections removed)

Required Actions:

Please ensure that any automated workflows or reporting tools relying on this specific integration are migrated to **[Alternative System/Method]** prior to the discontinuation date to avoid service interruptions.

If you believe this integration supports a critical business function that has not been accounted for, please contact the IT Department at [Email/Phone Number] by [Date].

Thank you for your cooperation in streamlining our software environment.

Sincerely,

[Your Name]
[Your Title]
[Your Department]
