

# KITCHEN COCKROACH TREATMENT PREPARATION NOTICE

Dear Resident,

A professional pest control treatment for cockroaches is scheduled for your unit on:

---

To ensure the treatment is effective, you must complete the following preparation steps before the technician arrives:

- **Empty All Cabinets:** Remove all food, dishes, pots, pans, and utensils from kitchen cabinets, drawers, and pantries. Place items on a table and cover them with a clean sheet or plastic wrap.
- **Clear Countertops:** Remove all appliances (toasters, microwaves, coffee makers) and food items from the countertops.
- **Clean Surfaces:** Wipe down the inside of all emptied cabinets and drawers to remove crumbs, grease, and old shelf paper.
- **Pull Out Appliances:** If possible, pull the refrigerator and stove away from the wall to allow access for treatment behind them. Clean the floor area behind these appliances.
- **Manage Trash:** Empty all indoor trash cans and remove any recycling (especially cardboard boxes and paper bags).
- **Clear Floor Area:** Ensure the kitchen floor is swept, mopped, and clear of any loose items.
- **Pet and Child Safety:** Keep children and pets out of the kitchen area during the treatment. Cover fish tanks and turn off air pumps.

**IMPORTANT:** Failure to prepare your kitchen may result in the technician being unable to treat your unit, and a rescheduling fee may apply.

After the treatment, do not use strong cleaners or bleach on the treated surfaces, as this may remove the bait or insecticide applied by the professional.

Thank you for your cooperation.
