Reason for Consultation: Evaluation of Prostate Nodule

Dear [Referring Physician Name],

Thank you for referring [Patient Name] to our urology clinic for the evaluation of a prostate nodule identified during a recent [Physical Exam/Imaging Study].

Clinical Findings:

Upon Digital Rectal Examination (DRE), a [Description of Nodule: e.g., firm, 1cm, left-sided] nodule was palpated. The patient's current PSA level is [PSA Level] ng/mL, recorded on [Date]. The patient [does/does not] report obstructive voiding symptoms or a family history of prostate cancer.

Assessment:

The patient presents with a palpable prostate nodule, categorized as clinical stage [e.g., T2a]. While the PSA level is [within normal limits/elevated], the presence of a focal nodule warrants further diagnostic investigation to rule out malignancy.

Plan:

The following steps have been recommended and discussed with the patient:

- Multiparametric MRI (mpMRI) of the prostate for lesion characterization.
- Transrectal Ultrasound (TRUS) guided biopsy or MRI-fusion biopsy.
- Baseline laboratory work, including Urinalysis and repeat PSA.

We will update your office with the pathology results and the definitive management plan once the workup is complete. Please feel free to contact our office if you have any questions.

Sincerely,

[Urologist Name], MD
