[Patient Name]
[Patient Address]
[City, State, Zip Code]

Dear [Patient Name],

We are writing to provide you with the results of your recent genetic testing for [Condition/Gene Name], which was performed on [Date].

The results of your test are **inconclusive**. Specifically, the laboratory identified a **Variant of Uncertain Significance (VUS)**. This means that a change was found in your genetic code, but at this time, medical science does not have enough information to determine if this change is harmless or if it increases the risk for disease.

What this means for you:

- This is not a positive result and does not confirm a diagnosis.
- This is not a negative result and does not rule out a genetic predisposition.
- Medical management should currently be based on your personal and family health history rather than this specific genetic finding.

Genetic knowledge is constantly evolving. Laboratories periodically reclassify these variants as more data becomes available. We recommend that you contact our office every [12-24] months to check if the status of your variant has been updated.

We would like to schedule a follow-up counseling appointment to discuss these findings in detail, address your questions, and review your family history. Please call our office at [Phone Number] to arrange a time to speak with your genetic counselor or physician.

Sincerely,

[Provider Name]
