RE: Legal Advisory: Artificial Intelligence Risk Mitigation and Liability Framework

1. PURPOSE

This memorandum outlines the primary legal risks associated with the integration of Artificial Intelligence (AI) within the organization and provides a framework for liability mitigation.

2. KEY RISK DOMAINS

- **Intellectual Property:** Potential infringement of third-party copyrights during AI training or the loss of trade secret protections for data entered into public AI models.
- **Data Privacy and Security:** Risks concerning non-compliance with global data protection regulations (e.g., GDPR, CCPA) and unauthorized processing of Personally Identifiable Information (PII).
- **Algorithmic Bias and Discrimination:** Potential for disparate impact in automated decision-making processes leading to violations of labor and civil rights laws.
- **Regulatory Compliance:** Evolution of sector-specific AI mandates and emerging transparency requirements.

3. LIABILITY MITIGATION STRATEGIES

To limit corporate exposure, the following protocols are recommended:

- **AI Acceptable Use Policy:** Implementation of a formal policy governing how employees interact with generative AI tools.
- **Vendor Due Diligence:** Rigorous auditing of AI service providers regarding data provenance and indemnity clauses.
- **Human-in-the-Loop (HITL):** Mandatory human oversight for high-stakes AI outputs to ensure accuracy and accountability.
- **Inventory Management:** Maintaining a centralized registry of all AI applications currently deployed across departments.

4. CONCLUSION AND NEXT STEPS

As the legal landscape for AI remains fluid, continuous monitoring is required. We recommend a formal audit of current AI workflows to identify immediate vulnerabilities.

Sincerely,
