[Patient Address]

Dear [Patient Name],

I am writing to inform you of the results of your recent Pap smear performed on [Date].

The laboratory report indicates the presence of "Atypical Squamous Cells" (ASC). This result does not mean that you have cancer. It means that the cells collected do not look entirely normal, but they are not definitively precancerous or cancerous either. These changes are often caused by inflammation, infection, or the Human Papillomavirus (HPV).

Based on these findings, we recommend the following next step:

- Repeat Pap smear in [Number] months.
- HPV testing (if not already performed).
- Colposcopy (a closer examination of the cervix using a magnifying lens).
- Office consultation to discuss results in detail.

Please contact our office at [Phone Number] to schedule your follow-up appointment or to speak with a nurse regarding any questions you may have. It is important that we monitor these changes to ensure your continued health.

Sincerely,

[Doctor Signature/Name]
