Re: Screening Mammogram Results
Date of Service: [Date of Exam]

Dear [Patient Name],

The results of your recent screening mammogram are **normal**. There were no signs of breast cancer or other abnormalities found in your images.

Your results have been categorized as BI-RADS 1 (Negative), meaning your breast tissue appears healthy and unchanged. A copy of this report has been sent to your primary care provider, [Doctor's Name].

Even though this screening is normal, it is important to remember:

- Mammograms do not detect 100% of all breast cancers.
- Continue to perform regular breast self-exams.
- If you notice any new lumps, skin changes, or nipple discharge before your next exam, please contact your doctor immediately.

Unless your physician advises otherwise, you should continue with your routine annual screenings. We recommend scheduling your next mammogram in [Month/Year].

If you have any questions regarding this report, please contact our office at [Phone Number].

Sincerely,
[Facility Name]
[Radiology Department/Doctor Name]
