

Subject: Results of Your Thyroid Nodule Biopsy

Dear [Patient Name],

I am writing to share the results of the Fine Needle Aspiration (FNA) biopsy performed on your thyroid nodule on [Date of Procedure].

The pathology report indicates that the nodule is **benign** (non-cancerous). This is the most common result for thyroid biopsies and means that no immediate surgery or aggressive treatment is required at this time.

Based on these results, our recommended plan is:

- **Observation:** We will continue to monitor the nodule for any changes in size.
- **Follow-up Imaging:** Please schedule a follow-up ultrasound in [Number] months.
- **Symptom Monitoring:** If you notice new difficulty swallowing, hoarseness, or rapid growth in the neck area, please contact our office sooner.

A copy of the full pathology report has been added to your medical record. If you have any questions regarding these results, please feel free to schedule a follow-up appointment or message us through the patient portal.

Sincerely,

[Doctor Name]
