[City, State, Zip Code]

Dear [Patient Name],

We are writing to provide you with the results of your second trimester Quad Screen, which was performed on [Date of Blood Draw].

Result Summary: [Normal / Screen Negative / Screen Positive]

The Quad Screen is a screening test that measures four substances in your blood (AFP, hCG, Estriol, and Inhibin-A) to estimate the risk of certain chromosomal abnormalities, such as Down syndrome (Trisomy 21) and Edwards syndrome (Trisomy 18), as well as neural tube defects like spina bifida.

Your Specific Risks:

- Down Syndrome: [Insert Ratio, e.g., 1 in 5,000]
- Trisomy 18: [Insert Ratio]
- Neural Tube Defects: [Insert Ratio]

[Use this section if Normal]: These results indicate that your pregnancy is considered "low risk" for these conditions. Please note that a screening test does not rule out all possibilities, but it is a very reassuring result.

[Use this section if Abnormal]: These results do not mean your baby has a medical condition. It means that the risk is higher than the average threshold, and further testing or a detailed ultrasound is recommended to gather more information.

We will discuss these results further at your next scheduled appointment on [Date]. However, if you have immediate questions, please contact our office at [Phone Number].

Sincerely,
