Subject: Important Information Regarding Your Prenatal Screening Results

Dear [Patient Name],

We are writing to provide you with the results of your recent prenatal screening test (NIPT/Cell-free DNA screening) performed on [Date].

The laboratory has reported that the results are **inconclusive** (sometimes referred to as a "no call" result). This means the laboratory was unable to obtain a clear reading to provide a definitive screening risk for chromosomal conditions.

An inconclusive result does not necessarily mean there is a problem with your pregnancy. This frequently happens for technical reasons, such as:

- A low amount of fetal DNA in the blood sample (low fetal fraction).
- The timing of the blood draw during the pregnancy.
- Technical interference during the laboratory analysis.

Next Steps:

We recommend the following course of action:

- A repeat blood draw for a second screening attempt.
- A consultation with your healthcare provider or a genetic counselor to discuss these findings.
- A detailed ultrasound to monitor the development of the pregnancy.

Please contact our office at [Phone Number] as soon as possible to schedule an appointment or to arrange for your repeat blood work. We understand that receiving inconclusive news can be stressful and we are available to answer any questions you may have.

Sincerely,

[Provider Name/Clinic Signature]
