RE: Prostate Specific Antigen (PSA) Test Results

Dear [Patient Name],

We are writing to provide you with the results of your recent blood work performed on [Date of Test]. Your Prostate Specific Antigen (PSA) level was measured at [PSA Value] ng/mL.

This result is considered elevated based on the standard reference range for your age group. Please be aware that an elevated PSA level does not necessarily mean that prostate cancer is present. Higher levels can be caused by various factors, including an enlarged prostate (BPH), recent physical activity, or a urinary tract infection.

To better understand these results, we would like to schedule a follow-up appointment to discuss the next steps. This may include a repeat test, a physical examination, or a referral to a specialist (urologist).

Please call our office at [Phone Number] at your earliest convenience to schedule this follow-up consultation.

If you have any immediate questions, do not hesitate to contact our nursing staff.

Sincerely,

[Doctor Name/Provider Name]
