Re: Follow-up regarding tumor marker blood test results

Dear [Patient Name],

We are writing to provide an update regarding your recent blood test for [Name of Tumor Marker, e.g., PSA, CA-125, CEA].

The laboratory results for this specific test were inconclusive. This means the test did not provide a clear positive or negative result, or the levels were within a range that requires further clarification. Inconclusive results can occur for many reasons, including benign inflammation, recent illness, or technical variations in the lab processing.

To ensure we have the most accurate information, we request that you return to the lab for a repeat blood draw. This follow-up test will help us determine if any further action or investigation is necessary.

Next Steps:

- Please visit [Lab Name/Location] by [Date] to have your blood drawn again.
- You [do/do not] need to fast for this test.
- No new appointment is necessary; please bring your photo ID and insurance card.

Once the new results are available, our office will contact you to discuss them. If you have any questions or concerns in the meantime, please call us at [Phone Number].

Sincerely,

[Provider Name/Signature]
[Clinic/Hospital Name]
