Dear [Patient Name],

I am writing to provide you with the results of your recent routine blood work conducted on [Date of Lab Work].

Most of your levels are within the normal range. However, your results for [Specific Test, e.g., TSH or Blood Sugar] indicate that your current dosage of [Medication Name] is not fully managing your condition at this time.

Based on these findings, I am increasing your prescription for [Medication Name] from [Old Dosage] to [New Dosage] once daily. A new prescription has been sent to your pharmacy, [Pharmacy Name].

Please begin taking the new dose immediately. You may experience mild side effects as your body adjusts to the change. We will need to repeat your blood work in [Number of Weeks/Months] to monitor the effectiveness of this new dosage.

If you have any questions or experience any unusual symptoms, please contact our office at [Phone Number].

Sincerely,

[Doctor's Signature]
