Dear [Patient Name],

I am writing to follow up on your recent biopsy performed on [Date of Procedure].

The pathology report for the sample taken from your [Body Location] has returned as "indeterminate." This means that the laboratory was unable to provide a definitive diagnosis of either benign (non-cancerous) or malignant (cancerous) based on the tissue provided. While the cells do not clearly show cancer, they do not appear entirely normal either.

Because the results are inconclusive, we need to take further steps to ensure your health and safety. Based on your specific case, I am recommending the following next step:

- [Option 1: A repeat biopsy to gather a larger or different tissue sample.]
- [Option 2: Advanced molecular or genetic testing on the existing sample.]
- [Option 3: A surgical consultation for an excisional biopsy.]
- [Option 4: Short-term imaging surveillance in (Number) months.]

Please contact our office at [Phone Number] by [Date] to schedule your follow-up appointment or the recommended procedure. We will discuss these results in more detail during that visit and answer any questions you may have.

Sincerely,

[Doctor Signature]
